

Initial pulse analysis

How to get signal at pedestal level or non-ideal condition

Single pulse check

To find the way of analysis for specific case

- Pedestal form
- Pulse form
- Pulse information: start, peak, stop
- Pulse charge
- Pulse shape discrimination
- Pulse type: Identification

signal event 10: pedestal-model visualization

Cluster finding on harmonic-corrected waveform

signal event 18: pedestal-model visualization

Cluster finding on harmonic-corrected waveform

After harmonic subtraction: cluster finding diagnostic

Fit residual and final mask

Several pulse check

To find the way of analysis group of pulse

- Pedestal form distribution
- Pulse shape distribution: start, peak, stop
- Charge: window

Corrected signal waveforms: harmonic
Use this plot to choose WINDOW_CENTER_NS

Corrected signal waveforms: harmonic
Use this plot to choose WINDOW_CENTER_NS

Signal peak-time distribution: constant_ped_0_60ns

Condition check

To confirm the result

- Compare results between expected signal events and expected non-signal events

Input Qfixed spectra log-scale: constant_ped_0_60ns
